appli.io

Your job search, on autopilot.

A Chrome extension that reads your Gmail, classifies every application with AI, and keeps your entire job hunt organized — automatically.

WHY NOW

The job market has never been more overwhelming.

Application volume is exploding

Job seekers now send 100+ applications per cycle just to compete. The volume is too high to manage manually.

AI is now cheap enough

LLMs like DeepSeek V3 can classify emails for fractions of a cent. The infrastructure to build this didn't exist two years ago.

Gmail is universal

Nearly every job seeker uses Gmail. It holds the full paper trail of their job search — we just need to read it.

The tools people use today — spreadsheets and platform-specific trackers — were built for a different era. Appli.io is built for now.

PROBLEM STATEMENT

Job seekers are flying blind through their own job search.

> *"I applied to 80 companies last month. I honestly can't remember half of them — or whether any of them wrote back."*

🗂️

Spreadsheets don't scale

Manual entry takes hours. People stop updating them after the first week. You can't track what you don't log.

🔒

Platform trackers are silos

Jobright and Teal only see applications submitted on their platform — a fraction of where people actually apply.

🔕

Missed opportunities

A rejection slips by unread. A follow-up window closes. An interview invite gets buried under newsletters.

SOLUTION

One extension. Every application. Zero manual work.

1

Connect Gmail

OAuth2 read-only access. Pull up to a year of application emails in one click.

→

2

AI classifies

A local LLM reads each email and assigns Applied, Interview, Offer, or Rejected — with a reason.

→

3

Dashboard fills in

Company, role, status, and date populate automatically. Filterable, sortable, always current.

→

4

Go deeper

Resume diagnostic, interview simulator, company deep scan, and AI follow-up generator — all built in.

Auto email sync | AI classification | Resume diagnostic | Interview simulator | Company deep scan | Follow-up generator | Auto-log on Greenhouse / Lever / Workday / Ashby

See it in action.

Demo Video / Live Walkthrough

Replace this block with a screen recording, embedded video, or live product demo.

Show: Gmail sync → Dashboard populating → Resume Diagnostic → Interview Simulator → Deep Scan

REVENUE MODEL

Freemium to premium.

TIER	PRICE	WHAT'S INCLUDED
Free	**$0**	Gmail sync, dashboard, up to 30 days of history, auto-log on job boards
Pro	**$9.99 / mo**	Full year history, resume diagnostic, interview simulator, company deep scan, AI follow-up generator, unlimited LLM classifications
Annual	**$79 / yr**	Everything in Pro — 34% savings. Targets serious job seekers in active search cycles.

1,000 paying users at $9.99/mo = **$9,990 MRR**. Low churn expected — users stay active for the full duration of their job search.

TRACTION

We already built it.

Working MVP
Full Chrome extension live with Gmail sync, AI classification, and dashboard.

AI pipeline live
Two-stage classifier: fast keyword pass + DeepSeek V3 LLM with retry, cache, and queue logic.

Resume diagnostic
Accepts PDF, DOCX, TXT. Scores every bullet 1–10 with AI-rewritten alternatives.

Interview simulator
Live AI interviewer with speech recognition, text-to-speech, webcam input, and filler word tracking.

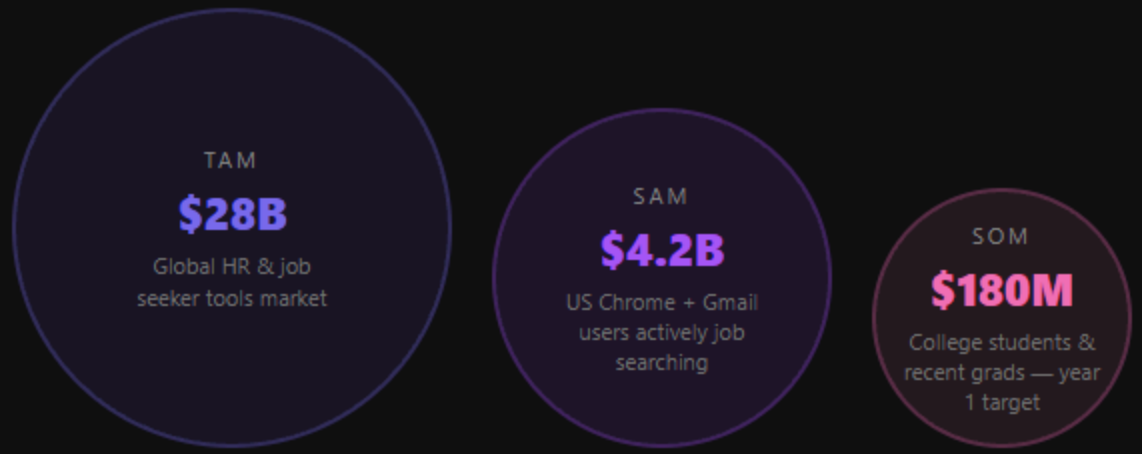
4
job boards auto-logged (Greenhouse, Lever, Workday, Ashby)

5
AI-powered features shipped

$0
infrastructure cost in MVP phase

MARKET OPPORTUNITY

A massive market with no dominant solution.



LinkedIn Premium generates **$1.7B/yr** from job seekers alone — and it doesn't track a single application.

There is no dominant AI-native application tracker in the Chrome Store today. The window is open.

THE TEAM

Built by people who lived the problem.

Your Name Here

Co-Founder · Full-Stack Engineering

CS major at [University]. [Add 1–2 sentences about your background, what you built on this project, and why you're the right person to build it.]

LinkedIn GitHub

Both founders went through the exact grind Appli.io solves — hundreds of applications, lost in their own inbox. They built the tool they wished existed.

ROADMAP

Where we're going.

- **Q2 2026** — **Chrome Store launch + beta users**
  Public release, onboard first 500 users, gather feedback on classification accuracy and UX.
- **Q3 2026** — **Pro tier + monetization live**
  Stripe integration, Pro unlock for resume diagnostic, interview simulator, and deep scan. First revenue.
- **Q4 2026** — **University career center partnerships**
  B2B licensing to career centers. Institutions pay per-student to give their grads an edge.
- **2027** — **Outlook + mobile companion**
  Expand beyond Gmail. Mobile app for on-the-go status checks and interview prep on the way to an interview.
